The OSHA 10-Hour Electrical Transmission & Distribution (ET&D) course is a specialized construction outreach program tailored for line workers and power employees. It provides an official OSHA 10-Hour card with a unique ET&D Partnership endorsement. Though called a 10-hour course, it spans 11.5 hours of training. The ET&D Partnership, an OSHA national strategic collaboration, designed this training to tackle the leading causes of injuries in the electric line construction industry.

Key Course Topics: Instead of general construction hazards, the ET&D [10-Hour Course Procedures](#) cover specific, high-risk topics:

- Equal-potential grounding
- Flame-resistant (FR) clothing and electrical arc protection
- Pre-job briefings
- Fall protection for the electrical industry

Attendees do not need to bring any special equipment with them for this course:
